Ridgeline Apparel Supply

Pro Tee Fabric Specification (scan)

This page represents a photographed / scanned paper document.
Unlike the text-layer PDF, this image has no selectable text
underneath it -- it is pixels only.

Copilot in PowerPoint cannot extract headings, bullet points
or figures from a page like this one, which is exactly why it
is used as the deliberate 'failure case' in the demo: running
'Create presentation from file' against a scan like this
produces a near-empty deck, or fails outright.

To make a scanned document usable for a Copilot demo like this,
run it through OCR first (e.g. via the PDF skill / OneDrive OCR)
so it gains a real text layer -- at which point it behaves like
the genuine Ridgeline fabric specification PDF alongside it.
